

WHAT IS CLAIMED IS:

1. A conductive liquid crystal device, comprising: a pair of oppositely disposed electrodes and a liquid crystalline organic layer disposed between the electrodes, wherein the organic layer has plural regions having mutually different electroconductivities.

2. A device according to Claim 1, wherein said plural regions have different alignment states of liquid crystal molecules.

3. A device according to Claim 2, wherein said different alignment states of liquid crystal molecules have been formed by laser light irradiation of the liquid crystalline organic layer.

4. A device according to Claim 2, wherein said different alignment states of liquid crystal molecules have been formed by voltage application to the liquid crystalline organic layer.

5. An organic electroluminescence device comprising: a conductive liquid crystal device which includes a pair of oppositely disposed electrodes and a liquid crystalline organic layer disposed between the electrodes, wherein the liquid crystalline organic

layer has plural regions having mutually different alignment states resulting in different luminances of luminescence from the device.

5 6. An organic electroluminescence device
comprising: a conductive liquid crystal device which
includes a pair of oppositely disposed electrodes and
at least two organic layers disposed between the
electrodes, wherein said at least two organic layers
10 include at least one liquid crystalline organic layer
having plural regions of different electro-
conductivities resulting in different luminances of
luminescence from the device.
